

1. What kind of website would you like to build? What kind of mobile app would you like to build?

I would like to make a website that shows what video games came out this year and what I rate them. For mobile, I would like to make an app that tells you about different pets and what you should think about before getting one.

2. Who would your targeted audience be for the website?

It would be for all ages to see but mostly people that play games would be the target.

3. How have you created web sites in the past? Examples – IMM 120 projects, personal websites, websites for other people. Provide details on the topic, how many pages, what kind of navigation, if it was responsive... etc.

I had to make sites for other classes using html. We would make a site on whatever we chose to do, and add a few pages to it and places for you to click to get to another page.

4. Who would your targeted audience be for the mobile app?

The target would be people that are looking into getting common pets (dogs, cats, hamsters, etc.).

5. How have you created mobile applications in the past? eg – MIT App Inventor, native iOS app, native Android app, etc. Provide details on the topic, how many screens in the mobile app and their functions, what kind of navigation... etc.

I have not made any mobile applications before to my memory. I have made a website before and formatted it to fit a mobile device's screen, but that is all.
